

Chapter 4

Worksheet

Instructions:

Please complete all activities in this worksheet. Write your answers in the spaces provided or on separate sheets if needed.

Worksheet for Chapter 4: Handling Minor Injuries

Hey, high school heroes! This worksheet is designed to reinforce your skills from Chapter 4 on handling minor injuries. From cuts and burns to sprains and nosebleeds, you'll test your knowledge and apply what you've learned through a mix of activities. Complete each section, reflect on real-life scenarios, and get ready to be the go-to teen medic in any situation. Grab a pen, rally your squad for extra fun, and let's dive in!

Part 1: Match the Injury to the Treatment

Match each type of minor injury to the correct initial treatment step. Write the letter of the treatment next to the injury in the table below.

| Injury               | Treatment Letter | Treatments                                                                                                                          |
|----------------------|------------------|-------------------------------------------------------------------------------------------------------------------------------------|
| Cuts and Scrapes     |                  | <ul style="list-style-type: none"><li>A. Sit upright, lean forward, and pinch the soft part of the nose for 5-10 minutes.</li></ul> |
| Burns (First-Degree) |                  | <ul style="list-style-type: none"><li>B. Rest the injured area and apply ice for 15-20 minutes to reduce swelling.</li></ul>        |
| Sprains and Strains  |                  | <ul style="list-style-type: none"><li>C. Press a clean cloth on the wound to stop bleeding before cleaning.</li></ul>               |
| Nosebleeds           |                  | <ul style="list-style-type: none"><li>D. Run cool water over the area for 10-15 minutes to stop further damage.</li></ul>           |

Injury

Treatment Letter

Treatments

Cuts and Scrapes

- A. Sit upright, lean forward, and pinch the soft part of the nose for 5-10 minutes.

Burns (First-Degree)

- B. Rest the injured area and apply ice for 15-20 minutes to reduce swelling.

#### Sprains and Strains

- C. Press a clean cloth on the wound to stop bleeding before cleaning.

#### Nosebleeds

- D. Run cool water over the area for 10-15 minutes to stop further damage.

**Instructions:** Fill in the "Treatment Letter" column with the correct letter (A, B, C, or D) corresponding to the appropriate treatment for each injury.

#### Part 2: True or False

Read each statement about handling minor injuries and circle whether it's True or False.

- You should pop blisters on a second-degree burn to help it heal faster.
  - True / False
- Raising an injured leg above heart level helps reduce swelling for a sprain.
  - True / False
- Applying butter to a burn is a safe way to soothe the pain.
  - True / False
- If a nosebleed doesn't stop after 20 minutes, you should seek medical help.
  - True / False
- Changing a bandage daily on a cut helps prevent infection.
  - True / False

#### Part 3: Scenario-Based Short Answers

Read each real-life teen scenario and write a brief response (2-3 sentences) on how you would handle the situation using the skills from Chapter 4.

- **Scenario 1: Skatepark Spill** Your friend wipes out at the skatepark and scrapes their knee badly. There's some dirt in the wound, and it's bleeding a little. What do you do? **Answer:**  
\_\_\_\_\_
- **Scenario 2: Kitchen Burn** During a cooking class, you accidentally touch a hot pan and get a small burn on your hand. It's red and stings, but there are no blisters. What steps do you take? **Answer:**  
\_\_\_\_\_
- **Scenario 3: Gym Class Twist** Your teammate twists their ankle during a basketball game in gym class. It's swelling up, and they can't put much weight on it. How do you help? **Answer:**  
\_\_\_\_\_

#### Part 4: Fill in the Blanks

Complete the sentences by filling in the missing words related to first aid for minor injuries. Use the word bank below.

**Word Bank:** infection, cool, R.I.C.E., pinch, blisters

- To prevent \_\_\_\_\_ in a cut, always wash your hands before and after dressing the wound and change bandages daily.
- For a minor burn, run \_\_\_\_\_ water over the area for 10-15 minutes to stop the heat from causing more damage.
- When treating a sprain, use the \_\_\_\_\_ method, which stands for Rest, Ice, Compression, and Elevation.

- If you get a nosebleed, \_\_\_\_\_ the soft part of your nose for at least 5-10 minutes while sitting upright.
- For second-degree burns, avoid popping \_\_\_\_\_ as it can lead to germs entering the wound.

#### **Part 5: Reflection and Action Plan**

Answer the following questions to think about how you can apply these skills in your daily life.

- What's one minor injury from Chapter 4 that you or someone you know has experienced? How was it handled, and what would you do differently now after learning these skills? **Answer:** \_\_\_\_\_
- List three items you'll include in a mini first aid kit to keep in your backpack or locker for quick access during emergencies. **Answer:**
  - 
  - 
  -
- Challenge yourself: Over the next week, teach one friend or family member a key first aid tip from this chapter (like how to stop a nosebleed or use R.I.C.E.). Who will you teach, and which skill will you share? **Answer:** \_\_\_\_\_
