

Chapter 3

Worksheet

Instructions:

Please complete all activities in this worksheet. Write your answers in the spaces provided or on separate sheets if needed.

Worksheet: Chapter 3 - Passwords and Account Security

Welcome to the Chapter 3 worksheet! This is your chance to test what you’ve learned about keeping your online accounts safe. We’ve kept it short and sweet with a variety of quick activities. Grab a pen, think through the questions, and chat with a classmate if you’re unsure. Let’s make sure your digital life is locked tight!

Section 1: Fill in the Blanks (Complete the Sentences) Use what you’ve learned to fill in the missing words.
Hint: Think about strong passwords and security tips!

- A strong password should be at least ____ characters long and include letters, numbers, and symbols.
- A ____ is an app that stores all your passwords securely so you don’t have to remember them.
- Two-Factor Authentication (2FA) adds an extra layer of security by requiring a second step, like a ____ sent to your phone.
- Phishing emails often try to trick you with ____ messages, like “Act now or lose your account!”

Section 2: Check the Box (Identify Safe Practices) Read each statement and check the box if it’s a SAFE practice for account security. Leave it unchecked if it’s risky.

- Using “password123” for all your accounts because it’s easy to remember.
- Turning on 2FA for your social media apps like Instagram or Snapchat.
- Clicking a link in an email that says “Your account is hacked, fix it now!”
- Using a password manager to create and store unique passwords for each account.

Section 3: Quick Match-Up (Connect the Term to the Action) Draw a line from each term on the left to the correct action or description on the right.

Term	Action/Description
Strong Password	Set up an extra step like a code to log in
Password Manager	Avoid clicking suspicious links in urgent emails
Two-Factor Authentication	Use a mix of characters, at least 12 long
Phishing Protection	Store all your login info in a secure app

Term**Action/Description**

Strong Password

Set up an extra step like a code to log in

Password Manager

Avoid clicking suspicious links in urgent emails

Two-Factor Authentication

Use a mix of characters, at least 12 long

Phishing Protection

Store all your login info in a secure app

Section 4: Spot the Risk (Circle the Correct Answer) Read the scenario and circle the option that shows a security risk. **Scenario:** Mia gets a text saying, "Your Roblox account needs verification! Click here to log in." The link looks weird, like "r0blox-login.com." What should she do? A) Click the link and enter her password to be safe. B) Ignore the text and check her account directly on the official Roblox app.

Section 5: Personal Action Plan (Think and Write One Idea) Write down one thing you'll do this week to improve your account security. Keep it simple! Example: "I'll turn on 2FA for my Gmail account." My Action:

Bonus Challenge (Optional Fun Task): Create a funny or silly passphrase in your head (don't write it here!) that you could turn into a strong password. Think of something like "MyCatEatsTacosOnTuesdays!" and imagine how you'd mix it with numbers and symbols. Smile at how random it is!
