

Chapter 5

Worksheet

Instructions:

Please complete all activities in this worksheet. Write your answers in the spaces provided or on separate sheets if needed.

Worksheet for Chapter 5: Safe Internet Habits

Purpose: To reinforce key concepts from Chapter 5, encourage critical thinking, and help students apply safe internet habits in real-life scenarios.

Part 1: Key Terms Matching (10 points)

Match the following terms from Chapter 5 to their correct definitions. Write the letter of the definition next to the term.

- HTTPS _____
- Public Wi-Fi _____
- Malware _____
- Clickbait _____
- VPN _____

Definitions: A. A type of software designed to harm or steal data from your device, often hidden in unsafe apps or downloads. B. A secure connection protocol that encrypts data between your device and a website, shown by a lock icon in the browser. C. Wireless internet available in places like cafes or malls, often unsecured and risky for private activities. D. Sensational headlines or posts designed to trick you into clicking, often leading to scams or suspicious links. E. A Virtual Private Network that creates a secure, encrypted connection to protect your data on public networks.

Part 2: True or False (10 points)

Read each statement carefully and circle **True** or **False**. If the statement is false, briefly explain why in the space provided.

- HTTPS means a website is always 100% safe and can't be a scam. True / False Why?

- Public Wi-Fi is safe for logging into personal accounts as long as you trust the location. True / False Why?

- Downloading apps from official stores like Google Play or Apple App Store reduces the risk of malware. True / False Why? _____
- Clickbait headlines often use shocking or unbelievable claims to make you click without thinking. True / False Why? _____
- Using a VPN on public Wi-Fi can help protect your data from hackers. True / False Why?

Part 3: Short Answer Scenarios (20 points)

Read each scenario below and answer the questions in complete sentences.

Scenario 1: Public Wi-Fi Dilemma Alex is at a coffee shop and connects to their free Wi-Fi to finish a school project. He needs to log into his Google account to access his saved work, but he's not sure if the connection is secure.

- What risk does Alex face by logging in on public Wi-Fi? (2 points)
- What are two things Alex can do to protect himself before logging in? (3 points)

Scenario 2: Suspicious App Download Maya sees an ad on social media for a "free premium" version of a popular music app. The link takes her to a random website instead of the Google Play Store, and the app asks for access to her contacts and location.

- What type of threat might Maya be facing by downloading this app? (2 points)
- What should Maya do instead to safely get the app, and what are two red flags she should notice? (3 points)

Part 4: Spot the Threat – Interactive Challenge (10 points)

Look at the following examples and decide if they represent a potential cyber threat or unsafe habit. Circle **Yes** or **No**, and briefly explain why.

- A website URL starts with "<http://>" instead of "<https://>" and has no lock icon while asking for your password. Yes / No Why? _____
- You connect to a public Wi-Fi named "Free_Cafe_WiFi" without using a VPN and start online shopping. Yes / No Why? _____
- A post on Instagram says, "Get 1,000 Free Followers! Click Now!" with a shortened link like "bit.ly/win." Yes / No Why? _____
- You download a study app from the Apple App Store after checking its 4.8-star rating and reviews. Yes / No Why? _____

Part 5: Personal Action Plan (10 points)

Think about your own online habits and write a short action plan to practice safe internet habits from Chapter 5. Answer in complete sentences.

- What is one thing you'll do this week to ensure you're browsing securely (e.g., checking for HTTPS, avoiding unsafe sites)?
- How will you protect yourself the next time you use public Wi-Fi (e.g., using a VPN, avoiding personal logins)?
