

Chapter 7

Worksheet

Instructions:

Please complete all activities in this worksheet. Write your answers in the spaces provided or on separate sheets if needed.

Worksheet for Chapter 7: Data in Action – Real-World Applications Instructions: Complete the following tasks individually or in pairs as directed by your teacher. Write clear, thoughtful answers, and be ready to share your ideas with the class. Let's put data into action!

Part 1: Data in My Life (15 Minutes)

Goal: Connect data concepts to your personal experiences in sports, health, or education. **Task:** Choose one area from your life (sports, health, or education) where data plays a role. Answer the questions below in 4-5 sentences.

- What area did you pick, and why? (e.g., "I chose sports because I play soccer.")
- How is data already used in this area for you or others? (e.g., "My coach tracks goals scored to decide positions.")
- Suggest one new way data could be used to improve something in this area. (e.g., "An app could track practice time to help us balance school and sports.") **Space for Answer:**

Part 2: Data for Social Good – Quick Brainstorm (10 Minutes)

Goal: Think creatively about how data can solve big problems in the world. **Task:** Pick one global issue (e.g., climate change, hunger, or disasters) that matters to you. In 3-4 sentences, describe the issue and brainstorm one type of data that could help solve it, plus how it could be used. (e.g., "For climate change, tracking carbon emissions by city could show where to focus green projects.") **Space for Answer:**

Part 3: Mini Local Issue Data Plan (20 Minutes)

Goal: Practice identifying a local problem and planning a simple data collection approach, similar to the chapter's group project. **Task:** Imagine you've noticed a small issue in your school or neighborhood (e.g., long lunch lines or litter near a bus stop). Answer the following in short responses (1-2 sentences each):

- What is the local problem you've chosen, and why does it matter?
- What kind of data could you collect to understand this problem better? (e.g., "Count people in line at lunch for 3 days.")
- How would you collect this data, and who would help? (e.g., "I'd observe with a friend and use a notebook.")
- Suggest one possible solution based on data you might find. (e.g., "If lines peak at noon, add a second serving time.")

Part 4: Quick Reflection – My Data Superpower (5 Minutes)

Goal: Reflect on how data can empower you personally or in your community. **Task:** Write 2-3 sentences answering: How has this chapter made you see data differently, and how might you use it in the future? (e.g., "I now see data as a tool to fix things, not just numbers. I might track study habits to improve my grades.") **Space for Answer:**

Bonus Fun Challenge (Optional, 5 Minutes): Draw a quick sketch or doodle of yourself as a “Data Hero” using data to solve a problem (e.g., holding a chart to clean a park). Label it with a catchy slogan like “Data Saves the Day!” Share with the class for a laugh or applause! **Space for Sketch:** [Leave blank space or grid for drawing]
