

Chapter 8

Worksheet

Instructions:

Please complete all activities in this worksheet. Write your answers in the spaces provided or on separate sheets if needed.

Worksheet for Chapter 8: Research Ethics and Responsible Conduct

Activity 1: Respecting Intellectual Property and Copyright Laws

Objective: To practice giving credit to creators and using content legally in your projects. **Instructions:** Imagine you're creating a presentation on "Indian Street Food under ₹100 (approx. \$1.20)" and find a cool photo or quote online. Spend 10 minutes writing how you'd check if it's free to use or request permission from the creator. Note how you'd cite it (e.g., "Source: FoodieSnaps.com") in your ₹500 (approx. \$6) project. Then, answer the reflection question.

- **Content Chosen (photo/quote):** _____
- **How to Check or Request Permission:** _____
- **Citation Format:** _____

Reflection: Why is respecting intellectual property important for maintaining trust in your ₹1,000 (approx. \$12) school projects or personal vlogs, and how does it encourage creativity? (2 sentences)

Activity 2: Ethical Considerations in Data Collection and Surveys

Objective: To learn how to collect data respectfully and ethically from others. **Instructions:** Pretend you're conducting a survey on "Favorite Indian Snacks under ₹50 (approx. \$0.60)" for a sociology project. Spend 10 minutes designing a short 3-question survey and write how you'd ask for consent from participants (like classmates) and keep their answers private for your ₹500 (approx. \$6) report. Then, answer the reflection question.

- **Survey Questions (3):**
 - _____
 - _____
 - _____
- **How to Ask for Consent and Ensure Privacy:** _____

Reflection: How does getting consent and protecting privacy make participants feel safe to share honest answers for your ₹300 (approx. \$3.60) project, and why does this matter? (2 sentences)

Activity 3: Avoiding Fabrication and Falsification of Data

Objective: To practice honesty in reporting research results, even if they're not ideal. **Instructions:** Imagine you're doing a small experiment on "Battery Life of Phones under ₹10,000 (approx. \$120)" for a science project. You test 3 phones, but the results aren't as good as you expected. Spend 10 minutes writing the real (or pretend) results for each phone and explain how you'd report them honestly in your ₹1,000 (approx. \$12) display instead of making up better numbers. Then, answer the reflection question.

- **Results for 3 Phones:**

- Phone A: _____
- Phone B: _____
- Phone C: _____

- **How to Report Honestly:**

Reflection: Why is avoiding fabrication or falsification of data crucial for building credibility in your ₹2,000 (approx. \$24) school projects, and how does honesty benefit you in the long run? (2 sentences)

Activity 4: Understanding Cultural Sensitivity in Research

Objective: To practice researching and presenting topics with respect for diverse backgrounds. **Instructions:**

Choose a topic like “Indian Festivals” or “Traditional Games under ₹200 (approx. \$2.40).” Spend 15 minutes writing a short 4-sentence description for a pretend project, focusing on respectful language and avoiding stereotypes. Add a pretend citation (e.g., “Source: CultureInsights.com”) to show where you learned about the topic for your ₹500 (approx. \$6) work. Then, answer the reflection question.

- **Topic Chosen:** _____
- **Description with Respectful Language (4 sentences):**
- **Citation:** _____

Reflection: How does cultural sensitivity in research help you create more meaningful and respectful ₹1,000 (approx. \$12) projects or vlogs, and why is it important to avoid assumptions? (2 sentences)

Reflection Corner: After completing this worksheet, write a short note (3-4 sentences) on what you learned about research ethics and responsible conduct from these activities. Which concept—respecting intellectual property, ethical data collection, avoiding data falsification, or cultural sensitivity—do you think will help you most in school or personal projects like vlogging on “Budget Tech under ₹5,000 (approx. \$60),” and why?
