

Chapter 1

MCQs

Question 1

What does STEM stand for, and how do its components work together?

- ☐ A) Science, Technology, Education, Math; they work independently to solve different problems.
 - ☐ B) Science, Technology, Engineering, Math; they combine to create solutions like designing a self-driving car.
 - ☐ C) Systems, Tools, Engineering, Mechanics; they focus only on building physical structures.
 - ☐ D) Science, Teaching, Electronics, Math; they are used only in classroom settings.
- Correct Answer: B

Note: No correct answer specified for this question

Question 2

How does STEM impact everyday life for high school students?

- ☐ A) It only affects activities outside of school, like playing video games.
 - ☐ B) It has no real impact on daily routines since it's just for scientists.
 - ☐ C) It shapes daily life through things like smartphones, clean water, and school buses.
 - ☐ D) It is only relevant when studying for exams or doing homework.
- Correct Answer: C

Note: No correct answer specified for this question

Question 3

Which of the following is an example of a STEM career that combines creativity and technology?

- A) A civil engineer designing bridges.
 - B) A game developer coding virtual worlds like Minecraft.
 - C) A marine biologist studying ocean life.
 - D) An actuary calculating insurance risks.
- Correct Answer: B

Note: No correct answer specified for this question

Question 4

What is a key element of the STEM mindset, and why is it important?

- A) Memorizing facts; it helps in passing tests easily.
 - B) Curiosity; it drives discovery and leads to asking questions like "Why does this happen?"
 - C) Following instructions; it ensures you never make mistakes.
 - D) Avoiding challenges; it keeps learning stress-free.
- Correct Answer: B

Note: No correct answer specified for this question

Question 5

How can STEM help address global challenges like climate change, as discussed in the chapter?

- A) By ignoring the problem since it's too big for teens to solve.
 - B) By using science to study carbon levels and engineering to build wind turbines.
 - C) By focusing only on local issues and avoiding global concerns.
 - D) By relying solely on math without involving other STEM fields.
- Correct Answer: B

Note: No correct answer specified for this question
