

Chapter 10

MCQs

Question 1

What is Biomedical Science primarily focused on?

- ☐ A) Designing bridges and buildings using engineering principles
- ☒ B) Combining biology and technology to solve health-related problems
- ☐ C) Studying weather patterns and climate change
- ☐ D) Developing new software for gaming applications

Correct Answer: B)

Combining biology and technology to solve health-related problems

Question 2

Which body system is responsible for pumping blood and delivering oxygen throughout the body?

- ☒ B) Nervous System

Correct Answer: C)

Circulatory System

Question 3

What is the primary function of an MRI (Magnetic Resonance Imaging) machine in medical technology?

- A) To take images of bones using radiation
- B) To provide detailed images of soft tissues like muscles and brain using magnets and radio waves
- C) To replace damaged limbs with robotic parts
- D) To measure heart rate and steps through wearable sensors

Correct Answer: B)

To provide detailed images of soft tissues like muscles and brain using magnets and radio waves

Question 4

In the context of engineering solutions for health, what is the first step in the design process for creating a medical device?

- A) Building a prototype of the device
- B) Testing the device in real-world conditions
- C) Identifying a specific health problem to solve
- D) Finalizing the product for mass production

Correct Answer: C)

Identifying a specific health problem to solve

Question 5

What is a key ethical concern related to gene editing in Biomedical Science?

- A) Whether it is too expensive to develop new medical devices
- B) Whether it should be used to alter non-medical traits like appearance in humans
- C) Whether it requires too much time to test for safety
- D) Whether it can be used to improve computer software

Correct Answer: B)

Whether it should be used to alter non-medical traits like appearance in humans
